

System Scanner Pro

AI-Powered Distributed Endpoint Monitoring & Remote Scanning Platform

Technical Documentation Package | v3.1

User & Administrator Manual

Step-by-step operating guide for every dashboard feature

Project	System Scanner Pro (v3.1)
Document	User & Administrator Manual
Package date	August 21, 2026
Prepared by	Project Team - Kailasanathan (Team Leader), Saagr, Mega
Audience	Developers, administrators, testers and new team members
Status	Final

This document is part of a nine-volume documentation package generated from the actual project source code. All commands, file paths, endpoints and behaviours described here were verified against the repository at documentation time.

Table of Contents

1. Who This Manual Is For	3
2. Getting Started in 5 Minutes	3
3. Creating Your Account (Signup)	3
4. Logging In & Account Lockout	3
5. Forgot Password / Reset Flow	3
6. Dashboard Overview	3
7. Approving Pending Clients	4
8. Client Detail Page	4
9. Triggering Scans	4
10. Understanding Scan History & Diffs	4
11. Groups & Tags	4
12. Settings Page	4
13. Monitoring Center	5
14. Working With Alerts	5
15. Notifications Centre	5
16. Reports Library	5
17. Employees, Departments & Locations	6
18. Asset Register	6
19. Licenses	6
20. Maintenance Board	6
21. Executive Dashboard	6
22. Your Account Page	6
23. Audit Log Viewer	6
24. Downloading & Installing the Agent (For Machine Owners)	6

1. Who This Manual Is For

IT administrators and staff who operate the dashboard day-to-day. Developer internals are deliberately omitted here - see volumes 04/05. Screenshots are intentionally left as placeholders: capture them from your own deployment so the manual reflects your branding and data.

2. Getting Started in 5 Minutes

1. Open the server URL (e.g. <https://scanner.yourcompany.com>).
2. Log in with the administrator account created during setup.
3. Bookmark the dashboard; enable the dark theme if not already default.
4. Share the Connect URL (shown on the dashboard) with machine owners to enroll devices.

[SCREENSHOT TO BE ADDED]

Login page after fresh deployment

3. Creating Your Account (Signup)

Use Signup to create an administrator under your company when self-onboarding is enabled. Passwords must contain at least 10 characters including uppercase, lowercase, digit and special character. After signup you land on the dashboard automatically.

[SCREENSHOT TO BE ADDED]

Signup form with password rules visible

4. Logging In & Account Lockout

- Enter username/password; success lands on Dashboard.
- Five failed attempts within 30 minutes lock the account temporarily - wait out the window or ask an admin to clear attempts.
- Every attempt is recorded (see Audit Log) with IP and browser details.

[SCREENSHOT TO BE ADDED]

Login page + lockout error state

5. Forgot Password / Reset Flow

Current limitation

Submitting the forgot-password form generates a secure one-hour reset token, but NO email is sent by the current build. An administrator must retrieve/deliver the token or reset your password directly until email delivery is added (roadmap item).

1. Click 'Forgot password?' on the login page and submit your account email.
2. An administrator coordinates the token securely (out-of-band).
3. Open the reset link/form, provide token + new strong password.

6. Dashboard Overview

The landing view summarises the fleet: total/online/offline/pending device cards, health distribution chart, recent alerts list, and quick actions (Scan All, Add Client). Values update live via WebSocket - no refresh needed on VPS deployments.

[SCREENSHOT TO BE ADDED]

Main dashboard with populated fleet

7. Approving Pending Clients

1. Locate the Pending Clients panel (dashboard or Clients page).
2. Verify hostname/platform/fingerprint against the physical machine's owner.
3. Click Approve - status flips to online within ~30 s (next heartbeat).
4. Reject removes the enrollment attempt; the machine can re-register later.

[SCREENSHOT TO BE ADDED]

Pending clients card with approve/reject buttons

8. Client Detail Page

Click any device to open its dossier: identity block (key, fingerprint, group, tags), live metrics tiles, hardware inventory tree, installed software table with search, peripheral list, scan history timeline, change-diff viewer between two scans, event stream (USB/file/process/software), and maintenance/warranty links.

[SCREENSHOT TO BE ADDED]

Device detail: hardware tab expanded

9. Triggering Scans

Single device - Detail page -> Scan Now button.

Whole fleet - Dashboard -> Scan All.

Schedules - Per-client scan interval + enabled toggle on detail/edit form; scheduler picks it up next cycle.

Local demo - Admin Server page -> Local Scan inventories the host itself.

[SCREENSHOT TO BE ADDED]

Scan Now confirmation + progress toast

10. Understanding Scan History & Diffs

Each completed scan appears in Scan History with type (scheduled/manual/on-demand/local), timestamp and size. Open any two scans to view the computed diff: added/removed hardware, installed/uninstalled software, changed components - invaluable for spotting tampering or unannounced upgrades.

[SCREENSHOT TO BE ADDED]

Diff view highlighting a RAM upgrade

11. Groups & Tags

Create groups (e.g. 'Accounting', 'Lab-1') under Clients; assign devices via edit form. Tags are free-form comma labels useful for filtering. Group filters apply across client lists and several reports.

12. Settings Page

Section	What you can do
Company profile	Rename company, contact info
Security	Change your password; review policy message
Scanning	Default intervals; auto-approve flag (currently enforced OFF in code - approvals stay manual by design)
API keys	Generate sk_ keys once; copy immediately; set rate limits/IP allowlist; revoke
Danger zone	Maintenance utilities (documented in volume 03)

Table 1 - Settings sections

[SCREENSHOT TO BE ADDED]

Settings page, security section

13. Monitoring Center

Dedicated monitoring pages show per-device metric charts (CPU/RAM/disk/network over time), heartbeat timeline, current health score breakdown, active anomalies with method labels (zscore/iqr/moving_avg/threshold), predictive badges such as disk-full ETA days and failure-risk score, plus inventory browsers.

[SCREENSHOT TO BE ADDED]

Monitoring page with anomaly highlighted

14. Working With Alerts

1. Open Intelligence -> Alerts for the unified queue (monitoring + maintenance + rule-based).
2. Filter by severity/device/status; click a row for context (metric series snippet).
3. Acknowledge to claim ownership; Resolve closes with comment appended to AlertHistory.
4. Define Alert Rules (thresholds or anomaly methods) to automate future detection.

[SCREENSHOT TO BE ADDED]

Alerts list with severity colours

15. Notifications Centre

Bell icon aggregates notifications; preferences page lets each user choose which categories reach them. Delivery is currently in-app (email digest is a roadmap item).

16. Reports Library

1. Intelligence -> Reports lists ~25 report types (Asset Inventory, Device Health, License Compliance, Audit Summary and more).
2. Choose parameters (date range, company/group filters) and Generate.
3. Download as PDF, Excel (.xlsx) or CSV; generated files also persist under Reports history.
4. Schedule recurring packs via Scheduled Reports (cron-style cadence picker).

[SCREENSHOT TO BE ADDED]

Report generation modal with format buttons

17. Employees, Departments & Locations

Maintain the org tree before assigning assets: create Locations, then Departments inside them, then Employees with designation/contact. Each list supports inline search, CSV export and audit-logged edits.

18. Asset Register

1. Assets -> New Asset: fill tag, serial, category, vendor, purchase data; save as Draft.
2. Advance status through the guarded lifecycle (Draft->Pending->Approved->Purchased->Assigned->Retired) using the status button - invalid jumps are rejected.
3. Assign to an employee (creates assignment v2 record); transfer later keeps full AssetHistory lineage.
4. Print the QR label for physical tagging; attach invoice/warranty documents on the detail page.
5. Use Import/Export (Excel) for bulk moves.

[SCREENSHOT TO BE ADDED]

Asset detail with QR label visible

19. Licenses

Licenses page tracks product/vendor/seats/expiry/cost. Keys display masked; full key is protected. Assign seats to employees/devices; expiry warnings surface in Maintenance Alerts and dashboards ahead of renewal dates.

20. Maintenance Board

Plan corrective/preventive work: create a record linked to a device or asset, set priority and schedule, submit for approval, log completion notes and cost. Warranty records and downtime entries feed impact analytics; the Alerts queue flags upcoming services and prolonged outages.

21. Executive Dashboard

Leadership view aggregating fleet health distribution, top risk devices, asset value by category/status, license posture and alert trends - designed for wall displays; tiles refresh live.

22. Your Account Page

Update display name/contact, change password, review your recent login history (IP, device, time) and manage personal notification preferences.

23. Audit Log Viewer

Comprehensive who-did-what viewer spanning activity entries, admin audit rows, org changes and compliance events. Filter by actor/action/date range; export for auditors.

24. Downloading & Installing the Agent (For Machine Owners)

1. Open Download Client (/download-client/) and grab client_scanner.exe (Windows) or follow source instructions for macOS/Linux.
2. Run the installer/exe; accept any single-instance prompt.
3. The agent auto-discovers the server (LAN broadcast) or use the Connect URL your admin shared.
4. Machine appears as Pending - wait for approval; icon/tray feedback confirms connection.
